- *12 durable colors*

White

Wineberry

Straight Grain Karri

Sandy Beige

Rock Maple

Pewter

Medium Teak

Dark Mahogany

Clay

Champaigne

Light Cherry

Pewter

Inside-Out FAQs:

Q: If I use a deck stain or a water seal treatment on my deck's boards above, will it damage the ceiling system below?

A: No. These are mild solvent-based products and will not damage or penetrate the ceiling panels. If you ever need to pressure wash it, that's no problem either. The material is extremely damage resistant.

Q: I have a large deck. How long can the panels run?

A: We can easily accommodate any deck of any size. Even 25-foot spans are not a problem.

Q: Is ice or snow ever a problem for the system?

A: No, we can easily carry a snow or ice load of 20 PSF with attachments over 7 feet apart. Our system is the only one that can stand up to heavy ice and snow loads and is the strongest in the industry.

Q: Do you offer any kind of warranty or performance guaranty?

A: Since we are the manufacturer, we offer a limited LIFETIME performance warranty against any and all material defects as long as your deck is intact. Visit www.insideoutunderdeck.com for complete details.

Q: How long with the installation take?

A: Generally most installations take only one day. If the deck is larger, then a second day may be needed to complete the job.

Q: Can the area under the deck be enclosed for a screened porch, or have ceiling fans, lights, swings, hanging plants, etc. attached?

A: Absolutely. All Insideout systems are installed so that they can easily accommodate construction of screened porches, ceiling lights, and fans.
